

Data

We offer the top dedicated hosting and colocation services in Europe.

Dedicated Hosting and Colocation Services

With over 20 years of experience, Osmia delivers high-security, high-performance data centre hosting, designed to handle our customers' business-critical applications. Purpose-built and rigorously monitored, our facilities are equipped with fully redundant power, cooling, network and security systems to ensure maximum uptime and efficiency.

This is hosting at its best, built to give you peace of mind and the confidence that your core IT systems are in safe hands. And with flexible colocation options, you have the power to scale dynamically in state-of-the-art facilities.

Dedicated Hosting

Our data centres are a safe haven for business-critical servers, storage, network and security technology. We provide dedicated rack space, power, cooling and internet connectivity. Choose from a single 42U rack all the way up to an entire hall in our Tier 3 facilities.

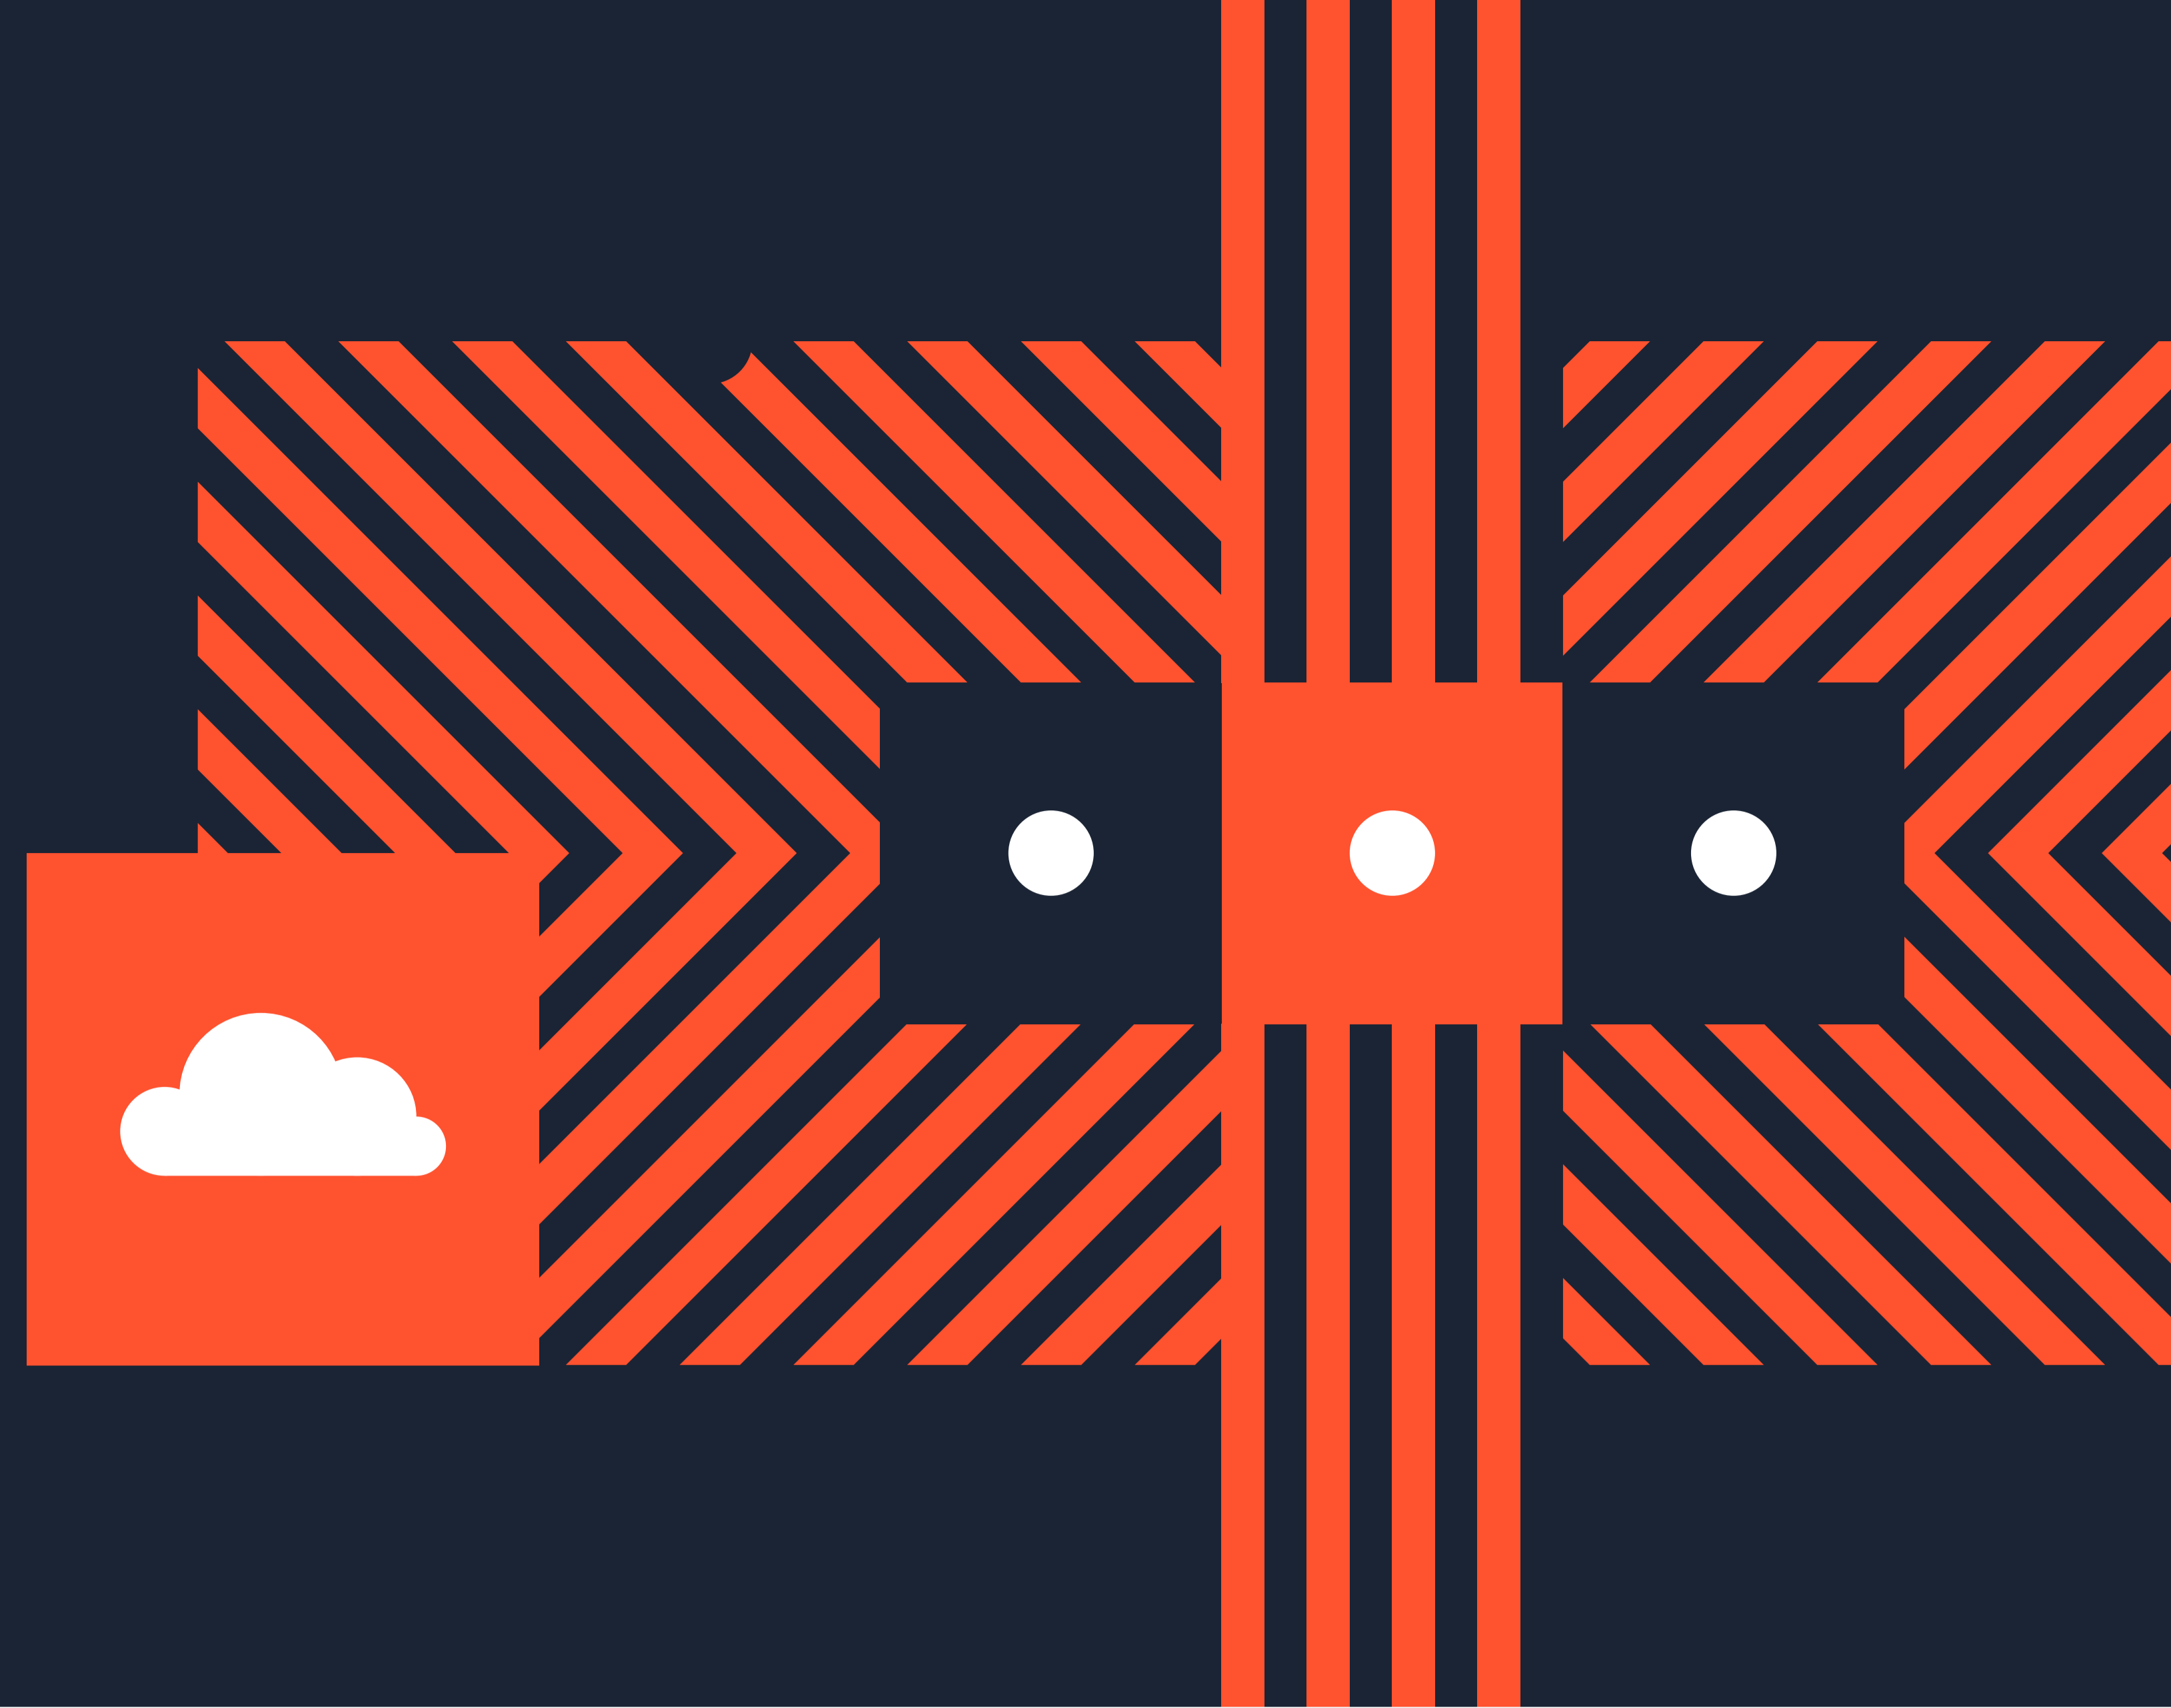

Colocation

Share rack space to save on costs while you grow in our co-located data centre hosting facilities. Colocation allows you to pay for the space, power, cooling and internet connectivity you need now while ensuring plenty of capacity to grow. This means you can start small and expand when you're ready, staying secure the entire time.

Features

Every business is unique, and so are Radiata's solutions. Explore some of the unique features built into our package:

High-performing network connectivity

Our network solutions deliver the fast, dedicated internet access you need to power your business seamlessly, available for Radiata's dedicated hosting and colocation clients. We make connectivity easy with flexible bandwidth options. Our internet service is supported by high speed, multi-gigabit circuits. Each circuit is fully redundant, using two internet service providers and diverse paths to ensure optimal reliability.

Customised solutions

Evolve your business with the support from Radiata and our technology partners. We work with you to create a solution that's perfectly tailored to your infrastructure needs. We go the extra mile to understand your goals, rather than just providing facilities. When you work with Radiata, you're tapping into decades of managed hosting experience.

Technology partner

Our services are delivered from eco-friendly data centres in Europe, which have been providing discreet, completely private cloud hosting IT services for years. Trusted by clients across a variety of sectors, our facilities combine high security with sustainability to keep your business performing.

**Let a Radiata expert customise your
cloud server and storage solutions.**
